5 pet of the month
6 ideas for lvna
new to zoom?

WE'RE BACK!

A lot has been going on in the background of LVNA, since the start of the social distancing guidelines, that we'd like to share with you.

We'll be hosting the September General Meeting on **Wednesday, September 9th, from 7:00-8:00 PM**, via Zoom (video conferencing). Our meeting will kick off with a discussion and Q&A by Officer Chen, from the Sunnyvale Department of Public Safety. Did you know that all of the roughly 200 Sunnyvale DPS officers are trained in emergency medical services, fire-fighting, and policing, making Sunnyvale one of only 128 jurisdictions in the country with combined police and fire departments? Given the recent attention and focus towards police reform, many of the more than 18,000 agencies around the country are looking at cities like Sunnyvale, which has been operating this way since 1950, as an example of ways to reform their departments.

To join the discussion, visit lvnasv.org/meeting – We'll begin promptly at 7:00 PM.

MAYORAL CANDIDATES FORUM

Our neighbors over at SNAIL are sponsoring the 2020 Sunnyvale Mayoral Candidates Forum and have invited Lakewood Village residents to attend. The Zoom webinar is on **Thursday, September 10th, from 7:00-9:00 PM**. Forum begins precisely at 7:00 PM on https://tinyurl.com/SvaleCandidateForum2020

FACTOID

We're introducing a new recurring column in the Villager – Factoid.

Each month will feature a fun, interesting, or even obscure fact about something relevant to our neighborhood. Given the ongoing wildfires and likelihood for more to come as climate change continues to push them towards an inevitability each year, this month's fact is on air quality ratings and, more specifically, why different sources can have varying results. Thanks, Cortney, for the great suggestion!

Air Quality Index (AQI) is the Environmental Protection Agency's metric for reporting air quality. In simple terms, it's a measurement for the amount of "stuff" in the air that isn't healthy for us to breathe. Some of this "stuff" is comprised of things you could actually see under a microscope, such as smoke and dust, and is typically classified by its size; PM2.5 refers to particulate matter less than 2.5 micrometers in diameter, and PM10 is for particulate matter under 10 micrometers (one one-hundredth of a millimeter). Other "stuff" included in the measurement could be completely invisible, such as Carbon Monoxide (CO) and Sulfur Dioxide (SO2). As you can imagine, higher numbers for AQI mean more pollution in the air.

Air Quality Index (AQI) Values	Levels of Health Concern	Colors
When the AQI is in this range:	***..air quality conditions are:***	***...as symbolized by this color:***
0 to 50	Good	Green
51 to 100	Moderate	Yellow
101 to 150	Unhealthy for Sensitive Groups	Orange
151 to 200	Unhealthy	Red
201 to 300	Very Unhealthy	Purple
301 to 500	Hazardous	Maroon

We're in the midst of poor air quality as a result of the nearby wildfires and wind blowing that smoke into our neighborhood. A couple popular tools for checking the air quality are AirNow.gov and PurpleAir.com. If you happen to check both, you may have noticed they frequently differ, often enough to be the difference between safe and unhealthy levels of pollution. Why? There are essentially 3 variables that lead to the differences.

1

Technology: AirNow gathers most of its information from EPA monitors, which have an array of different sensors and methods for detecting various pollutants in the air. These monitors are frequently calibrated to ensure a tight level of precision. PurpleAir's monitors are designed to detect particulate matter by measuring the size of those particles with lasers. These are commercially available for anyone to purchase and then register on the website as a new monitor location. These differences in technology, as well as the underlying purpose for each type of system, can lead to differences in precision for a given type of pollutant.

2

Location: There are many more PurpleAir monitors around the bay than AirNow monitors. Since PurpleAir monitors can be purchased by anyone and placed anywhere, a diesel truck driving by one of them could easily change the reading for a little while in that immediate area. PurpleAir would provide a much more accurate representation of the air quality for

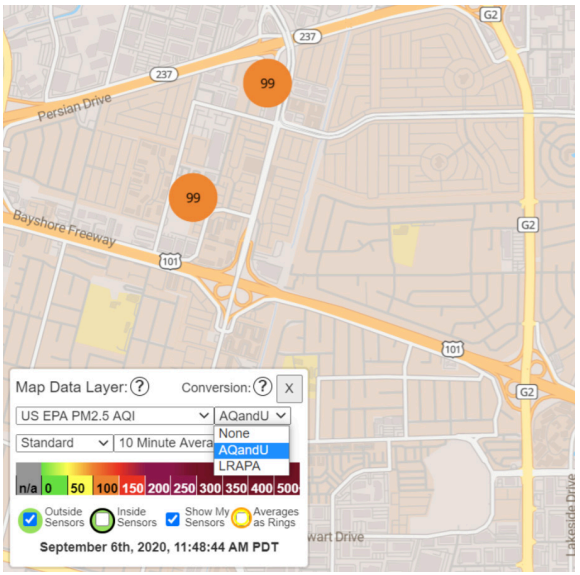

that general area than an overall city average. AirNow monitors, on the other hand, are strategically placed to provide a general average for a much larger area. The benefit is that they're placed where they'll gather an accurate picture for an entire zip code or city, but the downside is that localized contaminants won't be factored in. Air flows through different streets of Lakewood Village can result in significant AQI variations even from one block to another.

3

Refresh Rate: AirNow captures the air quality information over the span of about 1 hour. Changing air flows can almost instantly change air quality, which would then be averaged out over the duration of the refresh rate. This rate is typically about 10 minutes for PurpleAir monitors, but can also be adjusted on the website to view the aggregate for longer durations.

In a time like right now, where we know the biggest air pollutant is coming from wood smoke, the EPA recommends setting the conversion factor on PurpleAir to "AQandU." This applies an equation to the reading which gives a more accurate picture of the localized AQI measurement. Doing so can essentially provide similar accuracy to AirNow, but with the added benefit of much more localized readings and real-time updates.

WE WANT YOU TO VOLUNTEER FOR LVNA!

Do you have a vision to help build this community? Join a LVNA committee!

Social & Recreation Committee: Coordinate & plan events
Publicity Committee: Spread the word
Budget Committee: Plan how to spend LVNA's money
...and many more!

Have ideas for other committees to help bring the community together and promote neighborhood pride? We're all ears!

Visit lvnasv.org/bylaws for more information on predefined committees, but your imagination is the limit.

Help elevate YOUR neighborhood to the next level!

RECIPE CORNER

Eggplant Parmesan

1-2 eggplants
1 cup panko breadcrumbs
2 eggs
Italian seasoning
marinara sauce
mozzarella cheese
handful of fresh parsley or basil
salt

1. Cut eggplants into 1/2 inch thick slices. Place all of the slices onto 2 baking trays lined with paper towels. Generously salt both sides of the eggplant slices and let them sit at room temperature for approximately 45 minutes to an hour. This will help draw out moisture from the eggplant. Afterwards, use a clean paper towel to wipe both sides of the eggplant to remove excess salt and liquid.
2. Preheat oven to 425 degrees. In a shallow bowl, scramble 2 eggs. In another shallow bowl, add the panko breadcrumbs.
3. Grab an eggplant slice and dip it into the eggs (coat both sides). Then move eggplant into the breadcrumbs (coat one or both sides). Place eggplant onto a baking tray (breadcrumb side face-up if only one side is coated) lined with parchment paper or silicone baking mat. Repeat this step with all eggplant slices. Sprinkle Italian seasoning onto the tops of each slice.
4. Spray the slices with a cooking spray and place in preheated oven for about 30-35 minutes. Remove trays from oven.
5. Spoon a layer of marinara onto each eggplant slice, followed by a thin layer of mozzarella. Return tray to oven for about 5 more minutes. Once cheese has melted, take out of oven and top with freshly chopped basil or parsley. Serve alongside your favorite pasta.

PET OF THE MONTH

Wait - is that a rock? Yes, it's a "pet" rock! Can rocks even be pets?

We would love to feature more LVNA fur friends but we need your help! Email us at *editor@lvnasv.org with* a photo and small blurb (approx. 40-75 words) of your pet so that they can be in the spotlight! We don't really want to share other inanimate objects as "pets."

IDEAS FOR LVNA

Have any topics you would like to see discussed at a future LVNA general meeting? Let us know by emailing contact@lvnasv.org

Keep an eye on the Villager, lvnasv.org, and/or Nextdoor for upcoming meeting info. We look forward to seeing you there!

NEW TO ZOOM?

LVNA meetings have gone virtual!

We will be using Zoom, a video conferencing platform, for our September meeting. If you haven't used Zoom before, here are a few things to keep in mind. Before joining a Zoom meeting on a computer, tablet, or mobile device, we recommend downloading the Zoom app from Zoom's Download Center (linked here). You can also join through a browser but may have access to limited features. Once you are ready to actually join the meeting, go to lvnasv.org/meeting where you will find a "join" button. You can also enter our customized meeting ID and password (listed at lvnasv.org/meeting) on Zoom's app to access the meeting.

UPCOMING EVENTS

SEPTEMBER

09 lvna monthly meeting
virtual Zoom link: lvnasv.org/meeting
7:00 - 8:00 PM

All September Sunnyvale events are tentative. Please check lvnasv.org/events and the City of Sunnyvale's event calendar and COVID-19 impact page at sunnyvale.ca.gov/virus for the most up-to-date information.

OCTOBER

14 lvna monthly meeting
(virtual on Zoom)
7:00 - 8:00 PM

All September Sunnyvale events are tentative. Please check lvnasv.org/events and the City of Sunnyvale's event calendar and COVID-19 impact page at sunnyvale.ca.gov/virus for the most up-to-date information.
