NEXT MEETING

Join us on March 10th, 7:00 – 8:00 PM, for a discussion with our Mayor, Larry Klein. He'll be joining us for the first half of the meeting to discuss current topics related to Sunnyvale, as well as a general Q&A to answer any questions that Lakewood Village residents have for him.

Additionally, LVNA board member elections are this month! Please come show your support for LVNA by voting for your 2021-2022 board members. It's also not too late to consider running for one of the five LVNA board positions. We're always looking for a helping hand so, even if you aren't quite ready, we'd love the help any time throughout the year – Suggest an activity/event, write an article for the Villager, virtually lead a neighborhood class… the options are endless!

Join us virtually, on Zoom, on **March 10th, 7:00 – 8:00 PM**, for the discussion with Larry Klein, followed by the LVNA board member elections.

Zoom meeting credentials will be available 1 hour before the start of the meeting, at LVNASV.org/meeting

FACTOID

Do you know the radon level in your home? Unfortunately, the answer for most people is, "No." Up until a few years ago, that would have been my answer too. It wasn't until seeing a post from someone on Nextdoor, asking about neighbors' radon levels, when I discovered it's something that everyone should be aware of.

Radon is a naturally occurring gas, created when radium decays. Radium can be found everywhere – in the soil, water, and rocks – so it shouldn't come as a surprise that radon is naturally found in the atmosphere, all over the world.

There's no such thing as a "safe" level when it comes to radiation exposure. However, the outside levels for radon are essentially negligible and there's not much you could reasonably do to improve them anyway. The concern is for those of us fortunate enough to live indoors. Radon is so small that it can work its way from the soil and up through cracks in the foundation of buildings. Depending on how porous the concrete slab is, it's even capable of permeating the concrete itself. You may recall from physics classes, way back in the day, that warm air rises. While especially true in the winter, but even for many homes in the summer, inside temperatures tend to be higher than outside. This essentially turns buildings into giant chimneys; pulling cooler air through cracks/pores from underneath the structures as some of the hot air escapes through higher-elevation openings. That subterranean air may contain radon, which then starts to build up inside the home/building. The half-life for radon is only about 3 days and 20 hours but that's more than enough time to reach dangerously high levels, especially when there's a constant supply from underground. Considering most Lakewood Village homes still have their original 1950s slabs, likely with plenty of cracks serving as vacuums for radon, there may be a steady supply coming into your home.

The EPA estimates that about 21,000 people die each year in the U.S. as a result of exposure to radon. It's the #1 cause of lung cancer in non-smokers. In comparison, about 3,000 people die each year in the U.S. from house fires. Building codes require smoke detectors throughout a home but most people completely overlook the

risks from long-term exposure to radon.

If you don't know the radon level in your home, you're highly encouraged to test it. There are a few different methods but the cheapest option is to purchase a charcoal test kit. These kits are typically under $20 and will include the costs of shipping and lab fees. You simply place the kit in the lowest floor of your home (I don't think any of us have basements so that would likely be the main floor), wait the duration specified in the instructions (typically 2-90 days), pack it back up, and mail it off to the lab. The lab will analyze it and inform you of the results, via email. This is not intended to serve as a product recommendation, but here's an example for a complete radon test kit: https://www.amazon.com/dp/B00002N83E. Another option is to go digital. These devices are similar in size to a small thermostat or a smoke detector and are typically mounted on a wall for easy access and continuous readings. They're more expensive than the one-time-use test kits, but allow for both long-term and short-term readings. Also not intended to serve as a product recommendation, but here's an example: https://www.amazon.com/dp/B00H2VOSP8

The EPA recommends radon mitigation efforts if your average radon levels are above 4.0 pCi/L. If they're between 2.0 - 4.0 pCi/L, the EPA suggests that you at least consider steps to reduce it. Outdoor levels are in the ballpark of 0.3 pCi/L, and Congress set a long-term goal for all U.S. buildings to have indoor levels at or below outdoor levels, through mitigation efforts and construction techniques. If you find that your levels are above 2.0 pCi/L, don't worry, they can be fixed! More on that in next month's Villager. Spoiler alert – our home was averaging around 9.7 pCi/L in the winter. Windows are typically open more in the summer so there's "fresh" (0.3 pCi/L) air circulation to help keep it down.

Additional info -

Radon zone maps:

https://www.epa.gov/sites/production/files/2014-08/documents/california.pdf

https://www.epa.gov/sites/production/files/2015-07/documents/zonemapcolor.pdf

For renters: https://www.epa.gov/sites/production/files/2014-08/documents/tenants_guide.pdf

Property owners are required to keep rental properties habitable. If you test your levels and find that they're high, work with your landlord or property manager to have it fixed.

PET OF THE MONTH

This is Star. He's a 7-year-old Golden Retriever who likes going on walks to the park where he can run. He also loves food, rolling in grass, and playing with other dogs. The one thing he's not too fond of is when it's time to go back home.

Is your pet ready for the Villager spotlight? Submit your caption and photo to editor@lvnasv.org

ADVERTISE WITH US!

We have space throughout the Villager to host ads of various sizes. If you're interested in advertising with us, please email us at ads@lvnasv.org

The views, opinions, and facts presented in the Villager are of their respective authors/creators and don't necessarily reflect the views or opinions of the Lakewood Village Neighborhood Association, its officers, residents or other sponsors.
If you'd like to submit an article, event, etc., for possible publication in a future edition of the Villager, please send an email to our editor(s) at editor@lvnasv.org

RECIPE CORNER

Caprese Panini

2 slices bread
pesto (couple spoonfuls)
2-3 handfuls fresh spinach
2 slices mozzarella
tomato, *sliced & seeds removed*
black pepper
salt
1/2 tbsp butter
1 tbsp avocado oil

1. In a medium skillet, add avocado oil and 2-3 handfuls of fresh spinach. Cook for a couple of minutes or until the spinach has wilted down. Set aside & let cool.
2. Spread butter onto the outter-facing sides of your bread. Spread pesto on the inner-facing sides of your bread.
3. Using your hands or a clean kitchen towel, squeeze out as much water as you can from the cooked spinach. Set aside.
4. Assemble sandwich (suggested order listed): bread (pesto side inward), cheese, cooked spinach, tomato slices, black pepper & salt to taste, another layer of cheese, the other slice of bread (pesto side inward).
5. Cook over medium-low heat in a skillet or in a panini press until the cheese has melted. Enjoy!

Instyle Beauty Salon, located in Sunnyvale-Santa Clara, is offering readers $150 off microblading, a new and popular procedure that creates the perfect eyebrow!

Normally $450, Instyle Beauty Salon is offering readers $150 off, making it just $300 for the procedure – which also includes the touch-up visit that is recommended within 4-6 weeks of the initial procedure.

Manual microblading is a form of a semi-permanent tattoo that involves using tiny needles (instead of a tattoo gun) that make up a small blade to help deposit pigment under your skin, one by one, for natural looking hair strokes. The procedure takes about an hour to 2 hours and lasts 1.5-2 years before needing to be redone to look fresh. Topical numbing cream is used to maximize comfort. Microblading is perfect for anyone with any hair color and is tailored to each individual client.

For more information and to schedule a consultation, call or text (408) 605-2146.

LVNA MEETING RECAP

LVNA MEETING ON FEB 10

Otto Lee, Santa Clara County Supervisor, joined us to discuss his role as a supervisor and the projects they're currently tackling. Some of those include:

COVID

- Vaccination stats/details for Santa Clara County. Visit sccfreevax.org for more info
- Introduced the "No Wrong Door" policy – you can get vaccinated at any facility where it's available, as long as you qualify for current grouping (example: 65+)
- Vaccine is free – don't let someone try to charge you for it
- Continue with safety measures – wear 2 masks (surgical mask under, cloth mask on top); practice social distancing; wash your hands regularly; be cautious when out in public
- Testing has improved drastically since the early days – not as much discomfort with nose swabs
- Consider getting a oximeter to measure your blood-oxygen levels at home. If it drops below 95%, go get checked out.

Homelessness Recently constructed a couple dozen pallet homes (10x8) for short-term use. Safer and provides better privacy than tents. Over 200 unhoused die each year in Santa Clara County

Jail Current jail is dilapidated and requires repair. Trying to see how we can have both a new jail and better mental health resources

Contacts Feel free to reach out to Otto Lee, Larry Klein, and Omar Din. That way everyone's informed and can work together to address any concerns.

We encourage you to check out the meeting recording at https://youtu.be/pHPf9udigHY
